

POWER BOOSTER

For PDE80 Bosch Volkswagen system

Version: **CD2000-P**

" Power by hand"

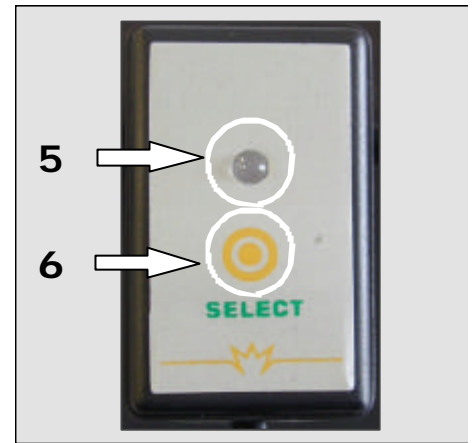

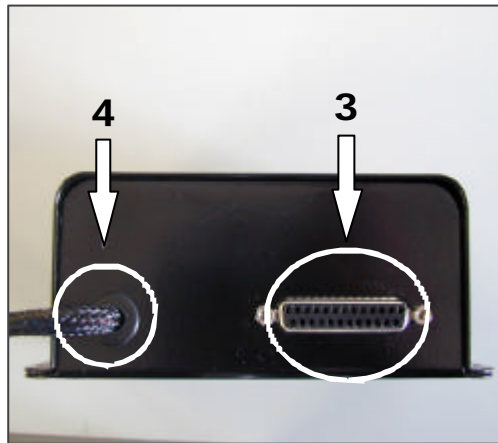

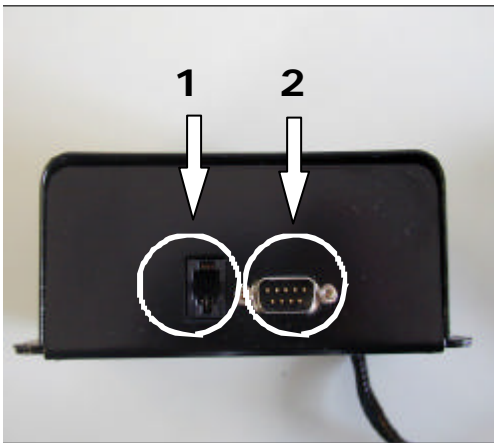

Presentation

The new programming and microprocessor power booster has been exclusively designed by "CORONA DIESEL". The instrument is the result of many years diesel engine experience carried out by a highly specialized technicians team.

The new instrument is able to boost engine power by obtaining a 20% or 30% power increase upon engine plant.

DESCRIPTION OF PARTS:

FRONT

BACK

CONTROL

1	CONTROL CONNECTOR
2	9 POLE COMPUTER CONNECTOR
3	25 POLE PANEL PROGRAMMING CONNECTOR
4	VEHICLE CONNECTING CABLES
5	LED SETTING; OFF=ORIGINAL; GREEN=1/2 POWER; RED=POWER
6	POWER SWITCH *

* = POWER BOOSTER CHANGES ITS STATE ONLY WHEN ACCELERATOR PEDAL IS RELEASED

CD2000-VP Power Booster operates on the pump and by increasing fuel it achieves a result that is definitely higher than any software modification. Power plant has to be mounted carefully; it is recommended not to exceed on regulating settings (through the CD2000-SP panel). Connect power supply (through the red-black wire) at the end so to avoid any irreparable damage to the booster or any other related problem

COMPETITION USE
